EXPLANATORY NOTES

I. GENERAL INFORMATION

General information

Gjensidige ADB (hereinafter referred to as the Company) was registered in the Register of Legal Entities of the Republic of Lithuania on 9 August 1993.

The Company is engaged in non-life insurance services. The licence for the insurance activity is No. 21.

As of 30 June 2022, and 31 December 2021, the Company's authorised share capital consisted of 6.402.217 ordinary registered shares with the par value of EUR 7,37 each.

99,97% of the Company's share capital is owned by Gjensidige Forsikring ASA, identification number (code) 995568217, registered address Schweigaards gate 21, 0191 Oslo, 0301 Oslo, Norway (hereinafter referred to as Gjensidige Forsikring ASA and the Shareholder), and 0,03% by the minority shareholders, an individual.

Shareholder	Number of shares, pcs.
Gjensidige Forsikring ASA	6.400.091
Private persons	2.126
Total	6.402.217

As of 30 June 2022, Gjensidige Forsikring ASA group in the Baltics owned the following companies:

- Gjensidige ADB with branches in Latvia and Estonia;
- RedGo Estonia OÜ in Estonia who owns UAB RedGo Lithuania in Lithuania.

Employees of the Company

As of 30 June 2022, the Company employed 673 employees (as of 31 December 2021 – 707):

Country	30.06.2022	31.12.2021
Lithuania	444	473
Latvia	194	195
Estonia	35	39
Total	673	707

Company's activities

The Company has the license for the following groups of insurance or activities of voluntary insurance of separate risks:

- Land vehicles other than railway transport insurance;
- Land vehicles third party liability insurance;
- Aircraft third party liability insurance;
- Hull (sea and internal waters) third party liability insurance;
- Accident insurance;
- Aircraft insurance;
- CARGO insurance;
- Property insurance against other risks;
- General third party liability insurance;
- Sickness insurance;
- Hull (sea and internal waters) insurance;
- Property insurance against fire and natural disasters;
- Suretyship insurance;
- Financial losses insurance;
- Assistance insurance;
- Railway rolling stock transport insurance.

The Company's license for the insurance activity enables to provide such types of obligatory insurance:

- Compulsory motor third party liability insurance;
- Compulsory insurance of building construction, reconstruction, repair, renovation (modernization), demolition or cultural heritage management, construction and civil liability

- Compulsory liability insurance of major researchers and contractors of biomedical researches;
- Compulsory liability insurance of railway companies (carriers) and companies using public railway infrastructure;
- Professional liability insurance of bankruptcy administrator in performing company bankruptcy procedures;
- Insurance of guarantee of performance of travel organiser's liabilities.

Information about branches and agencies of the Company

As of 30 June 2022, the Company had 2 foreign branches – in Latvia (3 regions and 17 sales units), in Estonia, and 9 sales units in Lithuania (as of 31 December 2021 – 2 foreign branches, 9 sales units). The head office of the Company is located at Zalgirio str. 90, Vilnius.

Information about subsidiaries and associated companies of the Company

As of 30 June 2022, and 31 December 2021, the Company had no subsidiaries and associated companies.

Financial year

The financial year of the Company starts on 1 January and ends on 31 December.

II. SIGNIFICANT ACCOUNTING POLICIES

Basis for preparation of financial statements

Statement of compliance

The Company's financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS), as adopted by the EU. The financial statements have been prepared on the historical cost basis except for the following items which are carried at fair value: financial assets carried at fair value through profit or loss and buildings which are measured at revalued amount, being fair value at date of valuation less subsequent accumulated amortization.

The interim financial statements have been prepared in accordance with the Accounting policy of the Company for 2021 with some exceptions.

The interim report does not include all the information required in a complete annual report and should be read in conjunction with the annual report for 2021.

The financial statements have been prepared on the assumption that the Company will be able to continue as a going concern in the foreseeable future.

Functional and Presentation Currency

The financial statements are presented in thousands of Euro (EUR). The Company's functional currency is Euro (EUR).

New standards and interpretations, reclassification of balances in the financial statements

Initial application of new amendments to the existing standards effective for the current reporting period

The following amendments to the existing standards issued by the International Accounting Standards Board (IASB) and adopted by the EU are effective for the current reporting period:

- **Amendments to IFRS 9 “Financial Instruments”, IAS 39 “Financial Instruments: Recognition and Measurement”, IFRS 7 “Financial Instruments: Disclosures”, IFRS 4 “Insurance Contracts” and IFRS 16 “Leases”** - Interest Rate Benchmark Reform — Phase 2 adopted by the EU on 13 January 2021 (effective for annual periods beginning on or after 1 January 2021),
- **Amendments to IFRS 16 “Leases”** - Covid-19-Related Rent Concessions beyond 30 June 2021 adopted by the EU on 30 August 2021 (effective from 1 April 2021 for financial years starting, at the latest, on or after 1 January 2021),
- **Amendments to IFRS 4 Insurance Contracts “Extension of the Temporary Exemption from Applying IFRS 9”** adopted by the EU on 16 December 2020 (the expiry date for the temporary

exemption from IFRS 9 was extended from 1 January 2021 to annual periods beginning on or after 1 January 2023).

The adoption of amendments to the existing standards has not led to any material changes in the Company's financial statements.

Standards and amendments to the existing standards issued by IASB and adopted by the EU but not yet effective:

At the date of authorisation of these financial statements, the following amendments to the existing standards were issued by IASB and adopted by the EU and which are not yet effective:

- **Amendments to IAS 16 “Property, Plant and Equipment”** - Proceeds before Intended Use adopted by the EU on 28 June 2021 (effective for annual periods beginning on or after 1 January 2022),
- **Amendments to IAS 37 “Provisions, Contingent Liabilities and Contingent Assets”** - Onerous Contracts - Cost of Fulfilling a Contract adopted by the EU on 28 June 2021 (effective for annual periods beginning on or after 1 January 2022),
- **Amendments to IFRS 3 “Business Combinations”** - Reference to the Conceptual Framework with amendments to IFRS 3 adopted by the EU on 28 June 2021 (effective for annual periods beginning on or after 1 January 2022),
- **IFRS 17 “Insurance Contracts”** including amendments to IFRS 17 adopted by the EU on 19 November 2021 (effective for annual periods beginning on or after 1 January 2023),
- **Amendments to various standards due to “Improvements to IFRSs (cycle 2018 -2020)”** resulting from the annual improvement project of IFRS (IFRS 1, IFRS 9, IFRS 16 and IAS 41) primarily with a view to removing inconsistencies and clarifying wording - adopted by the EU on 28 June 2021 (The amendments to IFRS 1, IFRS 9 and IAS 41 are effective for annual periods beginning on or after 1 January 2022. The amendment to IFRS 16 only regards an illustrative example, so no effective date is stated.).

New standards and amendments to the existing standards issued by IASB but not yet adopted by the EU

At present, IFRS as adopted by the EU do not significantly differ from regulations adopted by the International Accounting Standards Board (IASB) except for the following new standards and amendments to the existing standards, which were not endorsed for use in EU as at date of publication of financial statements (the effective dates stated below is for IFRS as issued by IASB):

- **IFRS 14 “Regulatory Deferral Accounts”** (effective for annual periods beginning on or after 1 January 2016) - the European Commission has decided not to launch the endorsement process of this interim standard and to wait for the final standard,
- **Amendments to IAS 1 “Presentation of Financial Statements”** - Classification of Liabilities as Current or Non-Current (effective for annual periods beginning on or after 1 January 2023),
- **Amendments to IAS 1 “Presentation of Financial Statements”** - Disclosure of Accounting Policies (effective for annual periods beginning on or after 1 January 2023),
- **Amendments to IAS 8 “Accounting Policies, Changes in Accounting Estimates and Errors”** - Definition of Accounting Estimates (effective for annual periods beginning on or after 1 January 2023),
- **Amendments to IAS 12 “Income Taxes”** - Deferred Tax related to Assets and Liabilities arising from a Single Transaction (effective for annual periods beginning on or after 1 January 2023),

- **Amendments to IFRS 10 “Consolidated Financial Statements” and IAS 28 “Investments in Associates and Joint Ventures”** - Sale or Contribution of Assets between an Investor and its Associate or Joint Venture and further amendments (effective date deferred indefinitely until the research project on the equity method has been concluded),
- **Amendments to IFRS 17 “Insurance contracts”** - Initial Application of IFRS 17 and IFRS 9 – Comparative Information (effective for annual periods beginning on or after 1 January 2023).

The Company anticipates that the adoption of IFRS 17 and IFRS 9 will have material impact on the financial statements of the Company in the period of initial application.

Gjensidige does not plan early implementation of these standards.

IFRS 9 Financial instruments (2014) in the insurance operations

IFRS 9 addresses the accounting for financial instruments and is effective for annual periods beginning on or after 1 January 2018. See also the section below about delayed implementation. The standard introduces new requirements for the classification and measurement of financial assets, including a new expected loss model for the recognition of impairment losses, and changed requirements for hedge accounting.

IFRS 9 contains three primary measurement categories for financial assets: amortised cost, fair value through other comprehensive income, and fair value through profit or loss. Financial assets will be classified as either at amortised cost, at fair value through other comprehensive income, or at fair value through profit or loss, depending on how they are managed and which contractual cash flow properties they have. IFRS 9 introduces a new requirement in connection with financial liabilities earmarked at fair value, where changes in fair value that can be attributed to the liabilities' credit risk are presented in other comprehensive income rather than over profit or loss.

Impairment provisions according to IFRS 9 shall be measured using an expected loss model, instead of an incurred loss model as in IAS 39. The impairment rules in IFRS 9 will be applicable to all financial assets measured at amortised cost and interest rate instruments at fair value through other comprehensive income. In addition, loan commitments, financial guarantee contracts and lease receivables are within the scope of the standard. The measurement of the provision for expected credit losses on financial assets depends on whether the credit risk has increased significantly since initial recognition. At initial recognition and if the credit risk has not increased significantly, the provision shall equal 12-month expected credit losses. If the credit risk has increased significantly, the provision shall equal lifetime expected credit losses. This dual approach replaces today's collective impairment model.

Preliminary assessments indicate that the financial assets will be measured according to fair value through profit or loss. Surplus/deficit values in portfolios measured at amortised cost will have a positive/negative effect on the opening balance when implementing IFRS 9.

IFRS 17 Insurance Contracts

IFRS 17 establishes the principles for the recognition, measurement, presentation and disclosure of insurance contracts and supersedes IFRS 4 Insurance contracts. The new standard applies to insurance contracts issued, to all reinsurance contracts and to investment contracts with discretionary participating features provided the entity also issues insurance contracts.

Gjensidige's choice of portfolios of insurance contracts is based on the following:

- where decisions are made,
- how high up in the product structure the products can be aggregated and still be considered to carry equal risk,
- the materiality of individual portfolios based on size.

On this basis, it has been decided that the level of aggregation for portfolios of insurance contracts will be based on a combination of Gjensidige's product and segment structure. Management reporting takes place at segment level, while the product structure is the risk assessment level.

Each portfolio of insurance contracts will either be placed in a group of contracts that at initial recognition are unlikely to become onerous at a later stage or with contracts that are onerous at initial recognition. Contracts issued more than one year apart will not be placed in the same group.

Insurance contracts in Gjensidige's general insurance operations mainly have a coverage period of one year or less and will therefore qualify for the use of a simplified method called the Premium Allocation Approach (PAA), to measure the liability for remaining coverage and liability for incurred claims. Under PAA liabilities for incurred claims are discounted.

Insurance income, insurance expenses and financial insurance income or expenses will be presented separately in the income statement. Reinsurance will be presented on separate lines.

Based on our preliminary assessments and on the basis of Gjensidige's current operations, other amendments to standards and interpretation statements will not have a significant effect.

Significant accounting policies

Estimates

Based on the International Financial Reporting Standards EU, the management, when preparing the financial statements, has to make certain estimates and assumptions that affect the disclosure of assets, liabilities, income, expenses and contingencies.

Estimates and key assumptions are reviewed on an ongoing basis and the effects of revisions are recognized in the period in which revised if the revision itself only affects that period, or also in the future periods if the revision affects both the current and future periods.

The estimates relate mainly to the definition of the useful lives of tangible and intangible assets, impairment of doubtful insurance debts and investments, technical provisions, receivable subrogations and recoveries and recognition of deferred tax asset, lease liability.

The result of changes in the mentioned estimates will be accounted for in the financial statements when determined.

Foreign currency

Foreign exchange transactions are translated into the functional currency of the country of operation in accordance with the exchange rate set by the European Central Bank on the date of the respective transaction. Monetary assets and liabilities denominated in foreign currencies are retranslated into functional currency in accordance with the exchange rate set by the European Central Bank on the last date of the reporting period. Non-monetary assets and liabilities denominated in foreign currency that are measured at fair value are translated at the exchange rate as at the date fair value was determined. Non-monetary items that measured in terms of historical cost or revalued amount in foreign currency are translated using the exchange rate at the date of transaction or the date of revaluation.

Profit or loss relating to fluctuations in the exchange rate on assets and liabilities denominated in a foreign currency are recognized in the statement of comprehensive income in the period in which the fluctuation occurs. Foreign exchange rates for the key currencies at the end of the reporting period were the following:

	30.06.2022	31.12.2021
PLN	4,6869	4,596
USD	1,0517	1,1334

Intangible assets

Intangible assets comprise software, goodwill and other intangible assets acquired in business combination. Intangible assets are carried at acquisition cost, less accumulated amortisation and impairment losses, if any. Amortisation is calculated on a straight-line basis over the estimated useful life of the asset.

The amortisation rates of intangible assets are the following:

Intangible asset group	Useful life (in years)
Software	4 - 7
Other assets	5

Business acquisitions

Business acquisitions are accounted for using the purchase method. Paid amount in a business combination process is measured at fair value.

Business combinations between companies under common control

Business combination involving entities or businesses under common control is a business combination in which all of the combining entities or businesses are ultimately controlled by the same party or parties both before and after the combination, and that control is not transitory. The assets and liabilities of the acquiree are recognised at their previous carrying amounts. No adjustments are made to reflect fair values and no new assets and liabilities of the acquiree are recognised at the date of the business combination. No new goodwill is recognised and the difference between the acquired net assets and the consideration is recognised directly in equity.

Property and equipment

a) Property

Property is carried at revalued value less any subsequent accumulated depreciation and accumulated impairment losses, if any.

In case real estate comprises important components with different useful lives, they are carried as separate units of real estate.

In cases where the value of a revalued asset unit increases, such an increase is accounted for as the asset value increase and revaluation reserve. When the asset unit value after revaluation decreases, such a decrease is registered as an impairment loss and is recognized as an accounting period loss due to asset impairment loss, if the asset was not revaluated previously by increasing its value. In cases where the value of an asset being revaluated was increased and the asset impairment loss is identified during the accounting period, at first the remaining non-depreciated revaluation reserve is written off, and where its balance is not sufficient – the asset impairment loss expenses are registered. In cases where the value of any previously revaluated asset increases, the previous impairment loss is reversed, and the remaining portion goes to the revaluation reserve. At the end of the accounting period, the building's revaluated portion depreciation is calculated, and the revaluation reserve is adjusted accordingly. Upon the sale or write-off of any revaluated asset, the respective non-depreciated balance of the revaluation reserve is reversed.

Depreciation is calculated on a straight-line basis over the estimated useful life of buildings. The estimated useful life of buildings is 15 to 40 years.

Subsequent repair works, which do not improve the useful features of the assets or do not extend the assets useful life period, are recognized as expenses immediately when incurred. Reconstruction costs and repair works, which extend the asset useful life period, or which increase the useful features are included in the cost of the asset and are depreciated over the newly determined useful life.

Gain or loss arising on the disposal of real estate is determined as the difference between the proceeds received and the carrying amount of the sold property as well as all disposal related costs. Upon the disposal of real estate, the transaction result is reflected in profit or loss.

At the end of every year, the Company reviews the estimated useful life, carrying amount and depreciation method of its real estate and the changes in accounting estimates, if any, are recognized on a prospective basis.

b) Plant and equipment (hereinafter referred to as non-current tangible assets)

Non-current tangible assets are stated at acquisition cost less any subsequent accumulated depreciation and accumulated impairment losses, if any. Calculation of depreciation is started from the month following the month of putting the asset into operation using the straight-line method over the estimated useful life of the tangible asset. Estimated useful lives of key groups of tangible assets are as follows:

Groups of non-current tangible assets	Useful life (in years)
Other non-current tangible assets	4–10

In case non-current tangible assets comprise important components with different useful lives, they are carried as separate units of non-current tangible assets.

Subsequent repair costs are added to the carrying amount of non-current tangible assets if they prolong the useful life of the asset or improve its useful features. All other repairs and maintenance are charged to profit or loss in the period in which they are incurred.

The costs of repairs of assets that are leased and/or used under loan-for-use agreements are attributed to non-current tangible assets and recognized as expenses over the lease period, provided the repairs extend the useful life of the asset or improve its useful features.

The gain or loss arising on the disposal of an item of non-current tangible assets is determined as the difference between the sales proceeds and the carrying amount of the asset. Gain or loss from disposal of non-current tangible asset is recognized in profit or loss when incurred.

At the end of every year, the Company reviews the estimated useful life, carrying amount and depreciation method of the tangible assets and the changes in accounting estimates, if any, are recognized on a prospective basis.

Impairment losses, write-offs and depreciation expenses are allocated to operating expenses of the Company.

Impairment of property, plant and equipment and intangible assets

At each reporting date, the Company reviews the carrying amounts of its property, tangible and intangible assets to determine whether there is any indication that those assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment loss (if any). Where it is not possible to estimate the recoverable amount of an individual asset, the Company estimates the recoverable amount of the cash-generating unit to which the asset belongs. Where a reasonable and consistent basis of allocation can be identified, the Company's assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Recoverable amount is the higher of fair value less costs to sell and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

If the recoverable amount of an asset (or cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (cash-generating unit) is reduced to its recoverable amount. An impairment loss is recognized immediately, unless the relevant asset is carried at a revalued amount, in which case the impairment loss is treated as a decrease of revaluation reserve (if any).

Where an impairment loss subsequently reverses, the carrying amount of the asset (cash-generating unit) is increased to the revised estimate of its recoverable amount, but so that the increased carrying amount does not exceed the carrying amount that would have been determined had no impairment loss been recognized for the asset (cash-generating unit) in prior years. A reversal of an impairment loss is recognized as income immediately, unless the relevant asset is carried at a revalued amount, in which case the reversal of the impairment loss is treated as an increase of revaluation reserve.

Financial instruments

Financial instruments are classified in one of the following categories

- at fair value through profit or loss
- available for sale
- investments held to maturity
- financial derivatives
- financial liabilities at amortised cost

Recognition and derecognition

Financial assets and liabilities are recognized when Gjensidige becomes a party to the instrument's contractual terms. Initial recognition is at fair value. For instruments that are not derivatives or measured at fair value through profit or loss, transaction expenses that are directly attributable to the acquisition or issuance of the financial asset or the financial liability, are included. Normally initial recognition will be equal to the transaction price. Subsequent to initial recognition the instruments are measured as described below.

Financial assets are derecognized when the contractual rights to cash flows from the financial asset expire, or when the Company transfers the financial asset in a transaction where all or practically all the risk and rewards related to ownership of the assets are transferred.

At fair value through profit or loss

Financial assets and liabilities are classified at fair value through profit or loss if they are held for trading or are designated as such upon initial recognition. All financial assets and liabilities can be designated at fair value through profit or loss if

- the classification reduces a mismatch in measurement or recognition that would have arisen otherwise as a result of different rules for the measurement of assets and liabilities,
- the financial assets are included in a portfolio that is measured and evaluated regularly at fair value.

Gjensidige holds an investment portfolio that is designated at fair value at initial recognition, and that is managed and evaluated regularly at fair value. This is according to the Board of Directors' approved risk management and investment strategy, and information based on fair value is provided regularly to the Company Management and the Board of Directors.

Transaction expenses are recognized in profit or loss when they incur. Financial assets at fair value through profit or loss are measured at fair value at the reporting date. Changes in fair value are recognized in profit or loss.

The category at fair value through profit or loss comprises the class shares and similar interests and bonds and other fixed income assets.

Available for sale

Financial assets available for sale are non-derivative financial assets that have been recognized initially in this category or are not recognized initially in any other category. Subsequent to initial recognition financial assets in this category are measured at fair value and gain or loss is recognized in other comprehensive income except for impairment losses, which are recognized in profit or loss.

The Company has no financial assets in this category.

Investments held to maturity

Investments held to maturity are non-derivative financial assets with payments that are fixed or which can be determined in addition to a fixed maturity date, in which a business has intentions and ability to hold to maturity with the exception of

- those that the business designates as at fair value through profit or loss at initial recognition,
- those that meet the definition of loans and receivables.

Investments held to maturity are measured at amortised cost using the effective interest method, less any impairment losses. The category investments held to maturity comprises the class bonds held to maturity.

Loans and Receivables

Receivables are non-derivative financial assets with payments that are fixed or determinable. Receivables are measured at amortised cost using the effective interest method, less any impairment losses.

The category Receivables comprises, receivables related to direct operations and reinsurance, other receivables, prepaid expenses and earned, not received income and cash and cash equivalents and obligations classified as receivables.

Cash and cash equivalents

Cash comprises cash on hand and cash in banks. Cash equivalents are short-term (with a maturity less than three months from the date of acquisition) liquid investments that are readily convertible to a known amount of cash and are subject to an insignificant risk of changes in value.

Investments in equities are not attributed to cash equivalents.

Deposits in credit institutions

All term deposits irrespective of the length of term are classified as term deposits in credit institutions (except for overnight deposits that are classified as cash at bank and on hand). Deposits in credit institutions are measured at amortised cost less impairment losses. Impairment loss is calculated as soon as it is determined that the deposit repayment is doubtful. Interest revenue is accrued applying the effective interest rate during the entire deposit term. The accrued deposit interest is stated together with the deposit's carrying value.

Financial liabilities at amortised cost

Financial liabilities are measured at amortised cost using the effective interest method. When the time horizon of the financial liability's due time is quite near in time the nominal interest rate is used when measuring amortised cost.

The category financial liabilities at amortised cost comprises the classes subordinated loan, deposits from and liabilities to customers, other liabilities, liabilities related to direct insurance and accrued expenses and deferred income.

Definition of fair value

Financial assets and liabilities measured at fair value are carried at the amount each asset/liability can be settled to in an orderly transaction between market participants at the measurements date.

Different valuation techniques and methods are used to estimate fair value depending on the type of financial instruments and to which extent they are traded in active markets. Instruments are classified in their entirety in one of three valuation levels in a hierarchy on the basis of the lowest level input that is significant to the fair value measurement in its entirety.

Quoted prices in active markets are considered the best estimate of an asset/liability's fair value. When quoted prices in active markets are not available, the fair value of financial assets/ liabilities is preferably estimated on the basis of valuation techniques based on observable market data. When neither quoted prices in active markets nor observable market data is available, the fair value of financial assets/liabilities is estimated based on valuation techniques which are based on non-observable market data.

Definition of amortised cost

Subsequent to initial recognition, investments held to maturity, loans and receivables and financial liabilities that are not measured at fair value are measured at amortised cost using the effective interest method. When calculating effective interest rate, future cash flows are estimated, and all contractual terms of the financial instrument are taken into consideration. Fees paid or received between the parties in the contract and transaction costs that are directly attributable to the transaction, are included as an integral component of determining the effective interest rate.

Impairment of financial assets

Investments held to maturity and Loans and receivables

For financial assets that are not measured at fair value, an assessment of whether there is objective evidence that there has been a reduction in the value of a financial asset or group of assets is made on each reporting date. Objective evidence might be information about credit report alerts, defaults, issuer or borrower suffering significant financial difficulties, bankruptcy or observable data indicating that there is a measurable reduction in future cash flows from a group of financial assets, even though the reduction cannot yet be linked to an individual asset.

An assessment is first made to whether objective evidence of impairment of financial assets that are individually significant exists. Financial assets that are not individually significant or that are assessed individually, but not impaired, are assessed in groups with respect to impairment. Assets with similar credit risk characteristics are grouped together.

If there is objective evidence that the asset is impaired, impairment loss are calculated as the difference between the carrying amount of the asset and the present value of estimated future cash flows discounted at the original effective interest rate.

Impairment losses are reversed if the reversal can be related objectively to an event occurring after the impairment loss was recognized.

Available for sale

For financial assets available for sale, an assessment to whether the assets are impaired is carried out quarterly.

If a decline in fair value of an available-for-sale financial asset, compared to cost, is significant or has lasted longer than nine months, the cumulative loss, measured as the difference between the historical cost and current fair value, less impairment loss on that financial asset that previously has been recognized in profit or loss, is removed from equity and recognized in profit or loss even though the financial asset has not been derecognized.

Impairment losses recognized in profit or loss are not reversed through profit or loss, but in other comprehensive income.

Share capital and reserves

Share capital and reserves are accounted for at the nominal value thereof.

Legal reserve

Pursuant to the Law on Companies of the Republic of Lithuania, legal reserve is formed from the distributable profit. Companies must transfer to the legal reserve 5% of their net profit, until the total amount of the reserve reaches 10% of the Company's share capital. The legal reserve may be used only for covering losses of the Company. The share of legal reserve in excess of 10% of the share capital may be distributed when distributing the profit for the succeeding financial year. It is not formed.

Revaluation reserve

Revaluation reserve represents increase in value of Company's non-current tangible assets (real estate) resulting from revaluation. Revaluation reserve is reduced in line with write-downs on assets previously revalued upwards, when assets revalued is written off, depreciated or disposed to the ownership of other persons. The revaluation reserve in respect of revaluation of tangible assets might be used to increase share capital. Revaluation reserve cannot be decreased to cover losses.

Technical provisions

Technical provisions are computed under IFRS EU with reference to the characteristics of the insurance risks assumed and the data available. The used assumptions are evaluated after prudent period of time since formation of provisions and may be subject to adjustment in case they are not reaffirmed.

a) The unearned premiums technical provision (hereinafter referred to as UPTP) is intended to cover insurance operating expenses according to all valid insurance risks. This provision is calculated as a part of premiums

written attributable to income of the Company for future accounting periods. Unearned premiums technical provision is calculated separately for each insurance policy, proportionally allocating insurance premium written to the period of risk validity. For the calculation of unearned premiums technical provision the day method is used, when the period of insurance risk validity and the period of insurance risk validity until the end of policy is expressed in days.

b) Unexpired risk technical provision (hereinafter referred to as URTP) is intended to cover the insufficiency of technical provisions under valid insurance risks, for which technical provisions are concluded. The provision is calculated individually for every insurance group by subtracting from unearned premiums technical provision the forecasted claims according to the valid agreements, forecasted claims handling expenses related to these claims, deferred acquisition and administrative expenses and by adding the forecasted subrogation amounts to be recovered.

Forecasted claims are calculated as the product of the remaining annual risk assumed, annual risk frequency and average claim. The related forecasted claims handling expenses are calculated as a product of forecasted claims amount and the claims handling coefficient. The forecasted subrogation amounts are calculated as a product of forecasted claims amount and subrogation recovery coefficient. Annual claims frequency and the average claim are calculated individually for every insurance subgroup according to the Company's statistics.

c) Outstanding claims technical provision (hereinafter referred to as OCTP) is intended to cover all outstanding claims, including amounts required for claims handling according to all claims already occurred as well as claims occurred but not reported, and excluding the outstanding amounts receivable from subrogation or regress rights and outstanding amounts receivable for realised residual assets. The calculation base of outstanding claims technical provision (excluding provision for incurred but not reported claims) represents the individual evaluation of every claim reported considering all available information at the moment of formation of this provision.

The estimate of claims incurred but not reported for all insurance groups with insufficient statistical data is calculated using the "Loss ratio" method and for the insurance groups with sufficient statistical data using the "Bornhuetter-Fergusson" or "Chain-Ladder" method.

Corporate income tax

Income tax expense comprises the expenses of the current income tax and deferred income tax.

Current tax

The tax currently payable is based on taxable profit for the year. Taxable profit differs from net profit as reported in profit or loss because it excludes items of income or expense that are taxable or deductible in other years and it further excludes items that are never taxable or deductible. Income tax is calculated using tax rates that have been enacted or substantively enacted by the end of the reporting period. In 2022 and 2021, the income tax applied to the Company is 15%.

The corporate income tax in Latvia is paid on the payment of dividends or other non-deductible expenses.

Corporate income tax in Estonia is calculated based on the legislation effective in Estonia. The corporate income tax is paid on the payment of dividends or other non-deductible expenses.

Deferred income tax

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognized for all taxable temporary differences and deferred tax assets are recognized to the extent that it is probable that taxable profits will be available against which deductible temporary differences can be utilized. Such assets and liabilities are not recognized if the temporary difference arises from goodwill or from the initial recognition (other than in a business combination) of other assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit.

The carrying amount of deferred income tax assets is reviewed at each reporting date.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset realised, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period. The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the Company expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

Deferred income tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Company intends to settle its current tax assets and liabilities on a net basis.

Current and deferred tax for the period

Current and deferred tax are recognized as an expense in profit or loss, except when they relate to items credited or debited directly to Other comprehensive income (hereinafter referred to as OCI), in which case the

tax is also recognized directly in OCI or if they emerged at the moment of initial recognition of a business combination.

Other provisions

Other provisions are recognized when the Company has a legal obligation as a result of the past event, it is probable that outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate of the amount can be made.

Employee benefits

Short-term employee benefits, including remuneration and social insurance contributions, bonuses and holiday pay, are included on an accrual basis into operating expenses over the entire employment period. Over the entire period of employment, the Company, on behalf of its employees, pays social insurance contributions to the State Social Insurance Fund Board; these contributions are made following local legal acts; the Company is not obligated to pay additional pension contributions for the years of service of its employees at the Company.

Leases

IFRS 16 requires all contracts that qualify under its definition as a lease to be reported on a lessee's balance sheet as right of use assets and lease liabilities. Short-term leases (less than 12 months) and leases of low-value assets are exempt from the requirements. A lessee shall recognise a right-of-use asset and a lease liability. The interest effect of discounting the lease liability shall be presented separately from the depreciation charge for the right-of-use asset. The depreciation expense will be presented with the group's other depreciations, whereas the interest effect of discounting will be presented as a financial item.

The cost of the right-of-use asset consists of:

- The amount of the initial measurement of lease liability;
- Any lease payments made at the before commencement date, less any lease incentives received;
- Incurred initial direct costs;
- The expenses incurred in relation to dismantling or removing the lease assets.

The assets managed at the right of use are depreciated by the straight-line method throughout the entire period set by the lease obligation.

The assets managed according to the right of use are broken down into the following groups:

- Land and building;
- Vehicles;
- Office equipments.

At the commencement date, the lease payments included in the measurement of the lease liability comprise the following payments for the right to use the underlying asset during the lease term that are not paid at the commencement date:

- Fixed payments, less any lease incentives receivable;
- Variable lease payments that depend on an index or a rate;
- Amounts expected to be payable by the lessee under residual value guarantees;
- Payments of penalties for terminating the lease, if the lease term reflects the lessee exercising an option to terminate the lease.

To determine whether a contract contains a lease, it is considered whether the contract conveys the right to control the use of an identified asset. This is for Gjensidige considered to be the case for rental contracts, leases for cars and other assets.

The rental period is calculated based on the duration of the agreement plus any option periods if these with reasonable certainty will be exercised. Joint expenses etc. are not recognised in the lease liability for the rental contracts.

The discount rate for the rental contracts is determined by looking at observable borrowing rates in the bond market for regions in which Gjensidige operates. The interest rates are adapted to the actual lease contracts duration etc. The discount rate for the leasing cars is determined based on an assessment of which loan interest Gjensidige would achieve for financing cars from a financing company.

Classification of insurance contracts

(i) Recognition and measurement of insurance contracts

The insurance contract signed by the insurer is only recognised as an insurance contract if under such contract the policyholder transfers significant insurance risks to the insurer. All of the Company's insurance contracts are classified as insurance contracts and they do not include any items linked to investment units or other investment items.

The classification of insurance contracts is based on the transfer of insurance risk, for example:

- Personal accident insurance,

- Travel insurance,
- Property insurance against damage or theft,
- Vehicle insurance,
- Liability insurance.

(ii) Insurance premiums written and outward reinsurance premiums

Insurance premiums written comprise the premiums under the contracts signed during the accounting period which last for no longer than one year, the premiums under the contracts signed during the accounting period which last for more than one year and are allocated to one year of insurance, and the premiums under the contracts signed during the prior financial year which last for more than one year and allocated for the accounting year, deducting any premiums under cancelled or terminated insurance policies. Earned premiums comprise the premiums attributable to the accounting period – premiums written during the year adjusted by change in unearned premiums reserve for the relative period.

Outward reinsurance premiums represent the share of premiums written in the accounting period, which was subject to reinsurance and adjusted by the change in unearned premiums technical provision.

Insurance claims

Insurance claims incurred comprise claims attributable to the accounting period, i.e. claims paid, claim handling costs, subtracting subrogation receivables and the outstanding claims technical provision change during the accounting period.

Subrogation received comprises the actually received amounts during the accounting period from third parties in cash or upon sale of transferred property, and the amounts receivable after the end of the accounting period which are related to the damages compensated prior to the end of the accounting period, taking into consideration the likely period of payment of such amounts and the likelihood of receipt of such amounts.

Motor Bureau fee calculated in Lithuania, Latvia and Estonia is accounted for as claims handling expenses.

Claims handling costs comprise the claims handling centre costs and certain portions of the costs incurred by the Company's headquarters and branch offices assigned in accordance with the methodology approved by the Company.

From administrative expenses to indirect claims handling expenses are reclassified by the approved instruction.

The reinsurers' share of the claims incurred comprises the amounts paid by reinsurers under reinsurance contracts or the amounts receivable from reinsurers for the claims payments made by the Company during the accounting period, adjusted by the outstanding claims technical provision reinsurers' share change during the accounting period, and the retrospective and external claims handling costs expenditure assigned to the reinsurers.

Investment activity income and expenses

All investment income and expenses related to insurance and equity capital investment operations are attributed to investment income and expenses.

Interest income is included in the statement of comprehensive income for all cash generating financial instruments using the effective interest rate method. Interest income includes coupon payments earned on fixed-income securities, interest earned on investments in bank deposits and loans, current account balances and discount or premium amortization or other difference between the book value of an interest bearing instrument and its value on the maturity date calculated based on the effective interest rate method.

Acquisition expenses

Acquisition expenses include expenses incurred concluding insurance contracts. Acquisition expenses represent commission payments to agents and intermediaries for the distribution of insurance policies, advertising and promotion expenses, operating expenses and employee payroll along with social security expenses of sales departments.

Commission expenses related to future periods are accounted for in the statement of financial position as deferred acquisition expenses. Deferred acquisition expenses are calculated on a pro-rata basis in respect of each insurance policy.

Commission charges are allocated directly to each insurance policy and respective type of insurance, whereas other acquisition expenses are allocated to respective types of insurance based on the number of agreements signed.

Administrative expenses

Administrative expenses include expenses that are not directly related to insurance contract conclusion, claims handling, and investment activity. These expenses are assigned to insurance groups in accordance with the methodology approved by the Company.

From administrative expenses to indirect claims handling expenses are reclassified by the approved instruction. Administrative expenses are accounted for on accrual basis.

Other income and expenses

Other income and respectively incurred expenses for the distribution of insurance products of other companies are reflected in other income and expenses right away, upon selling the relevant policy of another insurance company.

Other income includes income earned on services other than insurance services: interest not related to investments such as interest on cash in bank; income from foreign currency conversion and currency rate translation not related to investments; gain on revaluation of the items of the statement of financial position not related to investments, and other similar income not included in other items.

Other expenses include various expenses such as changes in foreign currency exchange rates of outstanding balances, loss on revaluation of the items of the statement of financial position not related to investments, fines and penalties for late payments, interest of the lease and other expenses not included into other items.

All other income and expenses are recognised on an accrual basis.

Statement of cash flows

The cash flow statement is prepared applying the direct method. Cash and cash equivalents comprise cash on hand and at banks. The received dividends are assigned in the cash flow statement to investment activities, and the paid dividends – to financial activities. The received interest is shown in investment activity.

Offsetting

While preparing the financial statements assets and liabilities, and income and expenses are not offset, except cases, when an individual international financial reporting standard requires such offset.

Related parties

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial and operating decisions. Related parties are defined as shareholders, members of the supervisory council and management board, their close relatives and companies that directly or indirectly through one or more intermediaries, control, or are controlled by, or are under common control with, the Company.

Regulatory requirements

The Company is subject to the regulatory requirements of the Bank of Lithuania. These requirements include minimum capital, minimum solvency, restricted investments, accounting and provision setting policies.

Contingencies

Contingent liabilities are not recognized in the financial statements, except for contingent liabilities in business combinations. Contingent liabilities are disclosed unless the possibility of an outflow of resources embodying economic benefits is remote.

A contingent asset is not recognized in the financial statements but disclosed when an inflow or economic benefits are probable.

Events after the end of the reporting period

Events after the end of the reporting period that provide additional information about the Company's position at the reporting date (adjusting events) are reflected in the financial statements. Events after the end of the reporting period that are not adjusting events are disclosed in the notes when material.

III. RISKS AND RISK MANAGEMENT

The Company's risk management is centralised at all Company's levels and includes the development, implementation and control of risk management activities related to the Company's goals. Given the level of competence and responsibility, risk management functions are distributed from the Company's Board to employees, defining them in the approved Company's Board's and the administration's work regulations, as well as in the job descriptions of employees.

The Company's risk management strategy is based on capital adequacy assessment principles, the aggregation of the types of risks faced into the overall assessment, and the assurance of solvency needs to cover them, in accordance with the principles of precaution, conservatism and prudence.

The main objectives of capital management strategy are to ensure continuous capital management and capital adequacy, timely response to the changes in capital size and assessment of the effect on capital of important decisions. The Company measures solvency capital requirement under Solvency II using a standard formula. The Company, according to the requirements of the Solvency II Directive and overall risk management strategy of Gjensidige group, ensures the Company's risk management system on the implementation of the three level protection principles.

Risk is limited by the legislation regulating the operations of insurance companies and internal regulations, as well as by Solvency II Directive and its implementing documents. The Company's risk appetite and risk limits are approved by the Company's Board in order to determine the maximum level of the risk to be tolerated. When this limit is exceeded, the Company takes actions to manage and prevent further increases in risks.

The Company applies risk management measures having assessed the significance of identified risks to achieving the Company's goals taking account of the costs and effectiveness of risk reduction measures:

1. Risk avoidance – motivated decision not to take risky activities.
2. Risk mitigation – process whereby the Company applies internal controls to reduce the probability of the risk of the Company's processes and operations and/or their potential effect to the tolerated level.
3. Risk transfer – risk sharing/transfer to the third party.
4. Risk accepting – assuming of possible gains or losses from certain risks.

Detailed rules of management of specific risk types (identification, measurement, key indicators, monitoring, control, reporting and management measures) are set in the internal governing documents detailing the management of a specific risk type.

The Company is exposed to various risks which can be categorized as, underwriting (insurance) risk, financial risks (market risk, credit risk, liquidity risk), operational (including compliance) risk and business and strategic risk. The Company assumes a different level of risk of each risk category and establishes risk assessment methodology individually for each risk category.

Capital risk management

The core function of insurance is the transfer of risk, and the Company is exposed to risk in both its insurance and investment operations. Identification, measurement and management of risk are essential parts of the operations. Risk and capital are, and must be interlinked. Any insurance company must adapt its risk exposure to its capital base. On the other hand, solvency capital, or equity, has a cost. A key objective of capital management is to balance these two aspects. Company's overall capital management objectives are firstly to ensure that the capitalization of the Company can sustain an adverse outcome without creating a financially distressed situation and secondly that the Company's capital is used in the most efficient way.

The Company defines capital as equity which is disclosed in the statement of financial position.

Pursuant to the Law on Insurance the authorised share capital of a joint stock company must be not less than EUR 1,000,000, and pursuant to the Lithuanian Law on Companies the shareholders' equity should not be lower than 50% of the company's registered share capital. As at 30 June 2022 and 31 December 2021 the Company complied with these requirements.

Insurance risks

The risk under any insurance contract is the probability that the insured event occurs and the uncertainty of the amount of the resulting claim. By the very nature of an insurance contract, this risk is random and must therefore be estimated.

The Company operates in Lithuania, Latvia and Estonia. The core business of the Company is acceptance and management of insurance risks. For a portfolio of insurance contracts where the theory of probability is applied to pricing and provisioning, the principal risk that the Company faces under its insurance contracts is that the actual claims and benefit payments exceed the carrying amount of the insurance liabilities. This could occur because the frequency and/or severity of claims and benefits are greater than estimated. Insurance events are random, and the actual number and amount of claims and benefits will vary from year to year from the level calculated using statistical techniques.

Calculation of the tariffs and prices on insurance product reflects current market conditions and covers the most probable assumptions necessary for the adjustment of future results, aiming to significantly mitigate financial risks.

Experience shows that the larger the portfolio of similar insurance contracts, the smaller the relative variability around the expected outcome will be. In addition, a more diversified portfolio is less likely to be affected by a change in any subset of the portfolio.

The Company has an overall underwriting policy, approved by the Board, with more detailed underwriting guidelines for each of the product segments, supported by strictly defined authorisation rules. Factors that aggravate insurance risk include lack of risk diversification in terms of type and amount of risk, geographical location and type of industry covered.

General insurance

Frequency and severity of claims

The frequency and severity of claims can be affected by several factors. The different factors will depend on the products, or lines of business (LOB) considered.

An increase in the frequency of claims can be due to seasonal effects and more sustainable effects. During the winter season snow and cold weather will cause an increase in the frequency of claims in Motor insurance. In Property insurance cold winter will cause an increase in the frequency of claims due to frozen water pipes and increased use of electrical power and open fire places for heating of the houses. More permanent shifts in the level of frequency of claims may occur due to e.g. change of customer behaviour and new types of claims. The effect on the profitability of a permanent change in the level of the frequency of claims will be significant.

The severity of claims is affected by several factors. In some LOBs, with relatively few claims, the severity may be heavily influenced by large claims. The number of incurred large claims during a year varies significantly from one year to another. This is typically for the commercial market. In most LOBs the underlying development of the severity of claims is influenced by inflation.

Growth in severity of claims may be driven by the development of consumer price index (CPI), salary increases, social inflation and the price for material and services purchased with claims settlement. In Property insurance the inflation will consist of CPI and an increase in building costs. For accident and health the insurance policies are divided into two main groups, one with fixed sum insured and another part where the compensation is adjusted by CPI in health care sector.

The Company manages these risks mainly through close supervision of the development for each LOB, underwriting guidelines and proactive claims handling. The monthly supervision of the results for each LOB contains an overview of both premium and loss development. If there is an adverse development of the profitability, sufficient measures will be put in place. This includes necessary premium increases to ensure that the profitability is within the accepted level. The analysis of the profitability can be tracked further to different groups of customers and portfolios. The underwriting guidelines attempts to ensure that the underwritten risks are well diversified in terms of type and amount of risk, industry and location of the risks. Underwriting limits are in place to enforce appropriate risk selection criteria and to ensure that accepted risks are within the limits of the reinsurance contracts.

Premiums, deductibles and elements in the conditions may be changed at the yearly renewal of policies. Insurance companies have the right to reject the payment of a fraudulent claim. The Company has the right not to renew individual policies in cases of insurance fraud, and in some instances legislation or policy conditions give the Company the right to terminate or not to renew individual policies in cases where special reasons indicate that such termination is reasonable. In cases where a claim has been paid, the Company is entitled to pursue any third parties liable for the damage, for payment of some or all costs (recourse claim).

The claims handling procedures also include a clear strategy and routines for purchasing material and services in an optimal manner. The routines are to use purchase agreements to ensure the quality of our benefits to our customers and to reduce the inflation risk.

(i) Basic product features

The terms and conditions of insurance contracts that have a material effect on the amount, timing and uncertainty of future cash flows arising from insurance contracts are set out below. In addition, the following gives an assessment of the Company's main products and the ways in which it manages the associated risks.

Property insurance

This insurance covers losses incurred as a result of damage to the property of the insured if the cause is one of the following insured risks:

- Fire
- Natural disasters (storm, flood)

- Theft
- Water
- Other

The risk inherent under property insurance is the rapid increase in prices for construction and renovation, as a result of which the policy holder may not be able to fully restore the property using the claim proceeds. This has an indirect impact on the relationship between the Company and policy holders.

Risk management is carried out by precisely defined assessment of the insured property to determine which property should be insured, which should be insured on special terms and which should not be accepted for insurance at all in line with the authority of the underwriter in the respective line of insurance.

In terms of loss adjustment, the Company is exposed to the risk of unfair actions on the part of policy holders. In order to reduce this risk the Company has set claim settlement administration limits for separate units and introduced high requirements for review of claim supporting documents.

The claim will usually be notified promptly and can be settled in the short term. Property business is therefore classified as 'short-tail', contrasted with the 'long-tail' classes where the ultimate claim cost takes longer to determine.

The key risks associated with this product are underwriting risk and claims experience risk.

Underwriting risk is the risk that the Company does not charge premiums appropriate for the insurance contracts. The pricing processes for the different insurance products involve estimates of future frequency and severity of claims, based on statistics from internal and external sources. Even if the underwriting criteria are adequate and the premium calculations are performed on a good statistical basis, the claims cost may deviate from the expected level, due to large claims, natural catastrophes etc. For private property insurance, it is expected that there will be large numbers of properties with similar risk profiles. However, for commercial business this may not be the case. Many commercial property proposals comprise a unique combination of location, type of business, and safety measures in place. Calculating a premium commensurate with the risk for these policies will be subjective, and hence risky.

Property classes are exposed to the risk that the insured will make false or invalid claims, or exaggerate the amount claimed following a loss. Insurance risk is managed primarily through pricing, independent assessment of property under international standards, product design, risk selection and reinsurance. The Company therefore monitors and reacts to changes in the general economic and commercial environment in which it operates.

Motor own damage insurance (CASCO)

This insurance covers losses incurred as a result of damage to the vehicle if the cause is one of the following insured risks:

- road accident
- weather claims
- fire
- falling of various objects
- illegal activities of third parties
- theft and/or robbery

Various extensions of cover are possible.

Insurance premiums are set in line with applicable insurance methodology.

The largest losses are incurred in the event of complete destruction and theft of the vehicle, but such cases are infrequent.

In order to prevent unfair dealing of policy holders, the Company performs detailed review of claim supporting documents, and ask competent institutions to perform additional investigation if necessary.

The claim will usually be notified promptly and can be settled in the short term. Casco is therefore classified as 'short-tail', contrasted with the 'long-tail' classes where the ultimate claim cost takes longer to determine.

Motor compulsory third party liability (MTPL)

Motor compulsory third party liability insures the vehicle owner's or authorised user's liability for damages caused to third parties as a result of a road accident. The objective of this line of insurance is to protect the interests of third parties who have suffered in road accidents and this line of insurance is regulated by the laws on motor third party liability compulsory insurance that regulate the legal relationship between vehicle owners, authorised users and insurers in relation to the compulsory insurance of third party liability of the vehicle owners and authorised users.

In view of the risk of inflation which impacts the amount of claims paid, the Company performs tariff analyses for this line of insurance and the assessment of the impact on the financial ratios on a regular basis.

Even if statistics reflect that previous claims have been notified promptly and can be settled without undue delay, Motor third party liability insurance is classified as 'long-tail' classes where the ultimate claim cost takes longer to determine.

Health insurance

Health insurance is developing into a stable line of business. The Company's identified risk in this line of business is the weak health care system and the obscure government policy in this area as well as changes in economic environment.

The Company monitors and reacts to changes in prices for medical services, monitors the claim ratios on employer's bases and adjust prices accordingly each year when renewal takes place.

Health insurance is short-tail business with regular short-term reporting delays.

(ii) Concentration of insurance risks

The concentration of insurance risks is one of the key risk factors in insurance which may have an adverse impact on the Company's liabilities under insurance contracts. The concentration of insurance risks may be caused by the occurrence of a single insurance event involving large liabilities or a number of separate insurance events which results in significant liabilities for the company towards the policy holders.

Since insurance risks will never be totally independent from each other, then irrespective of the portfolio size there is always a so-called non-diversified risk when the insurer generally pays more claims than planned. Non-diversified risk is related to changes in the external environmental factors such as stages of the country economic development which have a systematic impact on the frequency and amount of claims in certain lines of business. For example, the increase of the inflation rate will increase the amounts of claims in the majority of the portfolio while government amendments relating to one of the type of the compulsory insurance may suddenly increase the insurer's liabilities.

The Company has two key methods in managing these risks.

First, the risk is managed through appropriate underwriting. Underwriters are not permitted to underwrite risks unless the expected profits are commensurate with the risks assumed (refer to Insurance risk management).

Second, the residual risk is managed through the use of reinsurance. The Company purchases reinsurance coverage for various classes of its liability and property business. Management reviews the reinsurance program at least on an annual basis and determines the required changes. The Company assesses the costs and benefits associated with the reinsurance programme on an ongoing basis.

Geographic and other type of concentration

The Company's insured risks are mainly located in Lithuania, Latvia and Estonia except for travel policies being effective only outside the residence country of the insured. However, there are numerous products covering insurance accidents in Baltics and abroad. The risk concentration in motor and property insurance is in the largest cities of Lithuania, Latvia and Estonia. The risk concentration in motor insurance is increasing due to the growing number of vehicles and traffic intensity, resulting in an indirect impact on claim amounts in this line of insurance. Insurance regulations and methodology determines the necessary risk assessment for property, claim amount limits and reinsurance regulations which ensure risk management in the respective insurance lines.

(iii) Potential impact of catastrophic events

A significant insurance risk that the Company believes is necessary to evaluate and include in insurance methodologies is the risk of nature or man-made catastrophes which creates the likelihood of the risk of large liabilities. The Baltic market is characterized by a low risk of catastrophes. The most common natural catastrophes are storms and storm ravage, snow pressure, flood and spring inundation. Storm and flood exposed territories include forests, seashore lines and territories adjacent to rivers.

(iv) Potential impact of individual events

The biggest possible losses resulting from single events relate to motor third party liability insurance and property insurance. In order to limit possible losses resulting from single events the Company has bought non-proportional reinsurance cover.

Insurance risk management

(i) Underwriting policy

The management of insurance risks is performed by the Company by underwriting risks in accordance with policy. In accordance with the underwriting policy, each line of insurance has a set methodology and rules regulating the risk assessment methods to be applied, thus decreasing the likelihood of accepting liabilities with respect to risks that are in conflict with the Company's risk insurance policy and internal regulations.

The insurance methodology and rules define criteria and additional information for risk assessment by ensuring a systematic approach to risk assessment. As a result, the Company obtains consistent information in line with its requirements, for regular risk underwriting and introducing the required changes in the documents regulating risk underwriting.

The Company has set insurance limits based on operational experience, market requirements and risk assessment for each line of insurance.

Insurance tariffs are analysed and reviewed based on insurance events and claims paid on a regular basis, and changes are made to the tariffs using actuarial methods which help ensure the ability to meet liabilities. The reinsurance rules regulate the transfer of insurance risks to reinsurers. The Company's insurance type methodology and rules help insurance intermediaries and agents observe the Company's insurance guidelines on all insurance products offered on the Baltic market. The methodology for calculating technical reserves determines that appropriate reserves be created for incurred claims.

(ii) Claims development

Information on the claims development has been provided in the annual company financial statements.

(iii) Liability adequacy test

The estimation of technical provisions for an insurance portfolio represents an approximation of future cash flows for the claims payments, and there will always be an element of uncertainty in such calculations. Provision risks relate to this kind of uncertainty. The uncertainty depends on the nature of the risk. Risk with a short duration is less exposed to changes that will affect the future payments. Inflation is an underlying risk in most insurance products. The effect will be different, depending on the characteristics of each product and the terms and conditions that apply for the claims settlement.

On each reporting date, the Company prepares a liability adequacy test by assessing whether the insurance liabilities recognized during the reporting year for valid policies are adequate by comparing the insurance provisions established to the present value of the estimated future cash flows arising on existing insurance policies.

If the liability adequacy test shows a deficiency in the carrying amount of liabilities, the deficiency is recognised as a loss for the financial year by setting additional unexpired risk reserve.

The test is performed on line of business basis in each country separately and test is applied to the gross amounts of provisions, i.e., the effect of reinsurance is not taken into account.

(iv) Sources of uncertainty in the estimation of future claims payments

The Company is liable for insured events that occurred during the term of the contract, even if the loss is discovered after the end of the contract term, and claims are paid according to the policy conditions valid at the time of occurrence. As a result, claims are settled over a long period of time, and there is an element of the claims provision that relates to incurred but not reported claims (IBNR).

There are several variables that affect the amount and timing of cash flows from the insurance contracts. These variables mainly relate to the characteristics of the different types of risks covered and the applied risk management procedures. The compensation paid is according to the terms specified in the insurance contract. Compensation for claims with respect of bodily injuries are calculated as the present value of lost earnings, rehabilitation expenses and other expenses that the injured party will incur as a result of the accident or disease.

The estimated cost of claims includes expenses to be incurred in settling claims, net of the expected recourse amount and other recoveries. The Company takes all reasonable steps to ensure that it has appropriate information regarding its claims exposure. However, given the uncertainty in establishing claims provisions, it is likely that the final outcome will prove to be different from the original liabilities established. The liabilities in the financial statements related to these contracts comprise a provision for IBNR, a provision for reported claims not yet paid (RBNS) and a provision for unearned premiums and unexpired risks at the reporting date. The estimation of IBNR is generally subject to a greater degree of uncertainty than the estimation of the cost of settling claims already notified (RBNS), where information about the claim is available. There may be cases where certain claims may not be apparent to the insured until many years after the event that gave rise to the claims.

In estimating the liability for the cost of reported claims not yet paid, the Company considers any information available from loss adjusters, claims handlers and information about the costs of settling claims with similar characteristics in previous periods. All claims are assessed on a case-by-case basis by a claims handler. Claims with potential for distortive effects of their development are handled separately and projected to their ultimate by an additional provision. Where possible, the Company adopts multiple techniques to estimate the required level of provision. This provides a greater understanding of the trends inherent in the experience

being projected. The projections given by the various methodologies also assist in estimating the range of possible outcomes. The most appropriate estimation technique is selected taking into account the characteristics of the business class and the extent of the development of each accident year.

Insurance contracts are often classified as risks that are short-tail and risks that are long-tail. Short-tail risk is characterized by that the period between the occurrences, reporting and final settlement of claims is short. Long-tail risk is the opposite; the period between the occurrence, reporting and settlement of claims is long. In Property and Motor hull insurance the claims are reported soon after occurrence, while bodily injury claims may be reported several years after the occurrence and settled several years after they were reported. The provisions for IBNR for short-tail risks are relatively small, while for long-tail risks the provisions for IBNR may constitute a substantial part of the total loss provision.

Financial risks and risk management

Financial risk is a collective term for various types of risk related to financial assets. The Company's financial assets and liabilities, including investments, insurance receivables and reinsurance assets, may be exposed to financial risk as follows:

- *Market risk*: changes to the market situation may adversely impact the insurer's assets and/or liabilities, investments may be impaired, and return on assets decreased. Market risk includes interest rate, equity, property, currency, spread and concentration risk.
- *Counterparty (credit) risk*: loss arising from an issuer defaulting on its obligations or because of increased risk premiums for bonds with credit risk, and failure of a counterparty to meet contractual obligations;
- *Liquidity risk*: under certain adverse conditions, the insurer may be forced to sell *assets at a lower price* than their fair value in order to be able to settle liabilities.

Below is a description of each of these financial risks and a summary of methods used by the Company to manage these risks. Exposure to those risks arises in the normal course of business.

Market Risk

Market risk is the risk that movements in market prices, including foreign exchange rates, interest rates, credit spreads and equity prices will affect the Company's income or the value of its portfolios.

Market risks comprise:

- interest rate risk;
- foreign exchange risk;
- price risk.

Market risk arises from open positions in interest rate, currency and equity financial instruments, which are exposed to general and specific market movements and changes in the level of volatility of market prices.

i) Interest rate risk

Interest rate risk is defined as the loss in value resulting from a change in interest rates and is viewed both from the asset-only perspective and in relation to the interest-rate sensitivity of the liabilities.

Measures for management of the interest rate risk in the Company are centralized and based on the assessment of the impact of the interest rate risk on the Company's financial indices.

The Company does not have significant interest bearing liabilities and the largest share of interest bearing assets are at a fixed interest rate, therefore, the Company is not exposed to a significant interest rate risk and to the effects of fluctuations in interest rates resulting from different maturity or interest re-pricing profile of the Company's interest bearing assets and liabilities.

The overall exposure to interest rate risk is being reduced by matching a portfolio of fixed income instruments to the overall duration and the payout pattern of the insurance liabilities. Since the insurance liabilities are generally not discounted in the balance sheet, this implies that from an accounting perspective insurance liabilities will be exposed to changes in inflation (but not directly to interest rates). An economic perspective, however, argues for hedging interest rate risk, because the present value of the provisions will be exposed to changes in the real interest rate. From an accounting perspective, the risk from choosing this hedging strategy is reduced, because a major part of the bond portfolio is classified as held to maturity (hereafter only referred to as the amortized cost portfolio).

ii) *Foreign exchange risk*

The Company holds assets and liabilities denominated in foreign currency. Foreign exchange risk is the risk of financial losses resulting from fluctuations in foreign exchange. Part of insurance risks is denominated in foreign currencies. Based on the Company's policies, foreign exchange risk is limited to known or expected transactions in foreign currencies. The management of foreign exchange risk is based on investments into respective currencies. Therefore, profit and loss are most sensitive to fluctuations in PLN exchange rates which are considered insignificant. The Company is not engaged in any speculative transactions that may increase the foreign exchange risk.

iii) *Price risk*

Price risk refers to the risk of fluctuations in the value of financial instruments resulting from changes in market prices; the changes might impact the factors of an individual financial instrument or of all financial instruments traded on the market. The price risk occurs when the Company chooses a long-term or short-term position of a financial instrument.

Credit risk

Credit risk is the risk of losses or adverse changes in financial position resulting from changes in the standing of issuers of securities, business partners or debtors as a default of counter party or increase in credit margin. The credit risk is managed by imposing loan restrictions on one entity, a group of entities, a sector or a country, by diversification of assets and the portfolio of financial instruments, by reinsurance of the financial insurance portfolio and other measures.

(i) *Management of financial investments*

To manage its credit risk, the Company mostly invests in markets and investments having high ratings.

ii) *Insurance amounts receivable from direct insurance activities*

Credit risk related to client balances due to failure to pay insurance premiums only exists in relation to payment schedule set in insurance certificate when the certificate is paid or terminated.

The rules and conditions for insurance cover are presented in insurance methodology.

The Company treats overdue but not impaired receivables those which are less than 60 days past due; those that are overdue more than 60 days are impaired 100%.

(iii) *Reinsurance*

The Company acquires reinsurance in order to secure the Company's share capital; therefore, reinsurance is to be considered as a tool for both risk and capital management. The same models and methodology are used to analyse and acquire reinsurance as to the assessment of internal capital allocation based on risks.

In order to manage risks, the Company has approved the reinsurance programme which determines the reinsurance principles and the selection criteria of reinsurers. At least once a year the reinsurance programme is reviewed by the administration which also makes the necessary changes. The Company's reinsurance programme firstly comprises non-proportional reinsurance. The decisions on the reinsurance programme are taken based on the analysis of position, payments archive, and possibility to implement the model and the Company's capitalisation. The Company cooperates with the leading reinsurance companies as well as its parent company Gjensidige Forsikring.

Concentration risk is the pooling of risks which might lead to losses threatening the Company's solvency and financial position, the possibility of major losses due to excessive positions exceeding the limits set by the Company. Concentration risk is considered a composite of main risk and as a separate risk category is managed within the main risk types (insurance, market and credit).

Liquidity risk is the risk that the Company will be unable to meet its financial obligations on time and/or that it may be forced to sell financial assets in order to fulfil its obligations and will suffer a loss due to a lack of liquidity in the market. In managing liquidity risk, the Company seeks to ensure the timely execution of the Company's financial liabilities and the effective use of liquid funds. For managing liquidity risk, the Company uses the cash flows method, which is reasoned by planning and forecasting the cash flows.

Operational risk is the risk of direct or indirect loss resulting from inadequate or failed internal processes, systems, technologies, employees' actions or external factors. Operational risk management is a continuous

process for operational risk management, which is typical to all Company's products, operations, processes and systems, which are important to the Company, including such areas as transfer of essential or important Company's functions or operations to a service provider based on a contract, implementation of new product of service, and functioning of the Company's IT systems. The Company, managing its operational risk, considers both internal and external factors which might lead to operational risks. The Company's measures of operational risk management focus on the risk aversion, mitigation, transfer and/or assuming considering their effect on the achievement of the Company's goals, business continuity, considering the costs of risk mitigating measures and their effectiveness. The main goal of operational risk management is improvement of the Company's processes seeking to minimise the possible effect of operational risk to the tolerated level. The Company applies the following measures to mitigate the operational risk: implementation of control procedures, limitation of authorizations, four-eye principle, segregation of functions/duties, automation and other organisational and technical measures.

Operational risk events are registered in the register of the Operational risk events when the Company's employee notices such an event.

. The effectiveness of risk management system is regularly assessed by an independent Internal Audit Service, which performs an audit of the effectiveness of risk management system.

Climate related – risks

In line with the climate related - risks for sustainable economic activities, we will work on adapting relevant products and services to meet the criteria for sustainable general insurance. By 2025, 80 per cent of the products and services that fall within the scope of the taxonomy shall meet the criteria for sustainable general insurance. The taxonomy regulations also require us to report on customer relationships relating to activities that produce or distribute fossil energy.

We are covered by the following criteria in the EU taxonomy, and will further develop measures to accommodate them:

Gjensidige uses a forward-looking modelling of climate risk as the basis for pricing.

In cooperation with Gjensidige Group we aim to further develop the use of such models and scenarios to achieve the best possible basis for pricing.

Some of our insurance products contain incentives for damage prevention measures.

Gjensidige already offers discounts to customers who carry out risk reduction and damage prevention measures. It is our ambition to offer more damage-reducing products and services going forward.

We will develop innovative insurance coverage that meets climate adaptation requirements.

We look forward to established systems for sharing data and know-how with public authorities in the areas we operate in. That would include claims data and knowledge about the consequences of climate change, and we will accommodate any requests for additional sharing of claims data, in line with the taxonomy's specifications.

The climate related risks is also relevant to our investments. The requirement for sustainability in our investment activities has been key, and we will reshape our portfolio towards net zero emissions by 2050.

1. Property and equipment, Intangible assets

The movement of intangible assets, property and equipment for the period ended 30 June, was:

Items, EUR'000	Intangible assets	Property	Other fixed assets	Total
Acquisition cost				
Balance on 1 January 2021	14.043	173	4.257	18.473

2. Securities and other fixed income securities at fair value through profit or loss

Movement of assets in 2022 and 2021:

Items	Amounts, EUR'000
Balance on 01 January 2021	109.274
Assets acquired	36.732
Assets disposed	(16.040)
Increase(decrease) Value	(675)
Balance on 31 December 2021	129.291
Assets acquired	7.920
Assets disposed	(18.033)
Increase(decrease) Value	(6.771)
Balance on 30 June 2022	112.407

3. Debt securities and other fixed-income securities classified as held-to-maturity

Movement of assets in 2022 and 2021:

Items	Amounts, EUR'000
Balance on 01 January 2021	14.504
Assets acquired	-
Assets matured	(8.594)
Accrued interest	53
Balance on 31 December 2021	5.963
Assets acquired	-
Assets matured	(977)
Accrued interest	11
Balance on 30 June 2022	4.997

4. Amounts receivable

Amounts receivable, EUR'000	30.06.2022	31.12.2021
Receivables from insurance operations:	17.553	17.947
from policyholders	16.114	16.418
from intermediaries	1.439	1.529
Receivables from reinsurance operations	570	576
Other receivables	188	223
Receivable subrogations and recoveries	1.073	1.191
Total	19.384	19.937

5. Current accounts and cash on hand

Items, EUR'000	30.06.2022	31.12.2021
Current accounts at banks	5.358	2.717
Total	5.358	2.717

As of 30 June 2022, and 31 December 2021, the Company had no term deposits with maturity less than 3 months.

As of 30 June 2022, cash deposited in SEB bank AB for issued guarantees amounted to EUR 35 thousand (as of 31 December 2021 – EUR 52 thousand).

6. Share capital and reserves

Share capital

As of 30 June 2022, the share capital of the Company amounted to EUR 47.184 thousand (31 December 2021: EUR 47.184 thousand). The share capital of the Company is divided into 6.402.217 ordinary registered shares with the par value of EUR 7,37. All shares were fully paid as of 30 June 2022 and 31 December 2021.

	30.06.2022		31.12.2021	
	Amount	EUR'000	Amount	EUR'000
Ordinary shares with voting rights	6.402.217	47.184	6.402.217	47.184

Each share carries a right to vote at shareholder's meetings, a right to receive dividends as declared from time to time and a right to residual assets.

Company's shareholders	30.06.2022		31.12.2021	
	Number of shares	% Of share capital	Number of shares	% Of share capital
Gjensidige Forsikring	6.400.091	99,97	6.400.091	99,97
Private persons	2.126	0,03	2.126	0,03
Total	6.402.217	100	6.402.217	100

According to the Law on Insurance of the Republic of Lithuania, the share capital of an insurance company should be not less than EUR 1 million. As of 30 June 2022, and 31 December 2021, the Company complied with this requirement.

Share premium

In 2014, after the increase of the Company's share capital by 860.000 shares, share premiums were formed, which comprise the amount of the par value surplus of the issued shares. The nominal value was EUR 28,96 per share, the issue price was EUR 43,44 per share. There were changes in the amount of share premium in Q1 2022. The share premiums decreased in amount of EUR 6.584 thousand due to the financial loss coverage.

Revaluation reserve

Revaluation reserve represents increase in value of Company's non-current tangible assets (real estate) resulting from revaluation. Revaluation reserve is reduced in line with write-downs on assets previously revalued upwards, when assets revalued is written off, depreciated or disposed to the ownership of other persons. The revaluation reserve in respect of revaluation of tangible assets might be used to increase share capital. Revaluation reserve cannot be decreased to cover losses.

7. Technical provisions

Movement of non-life insurance technical provisions for period ended:

Items, EUR'000	Unearned premium provision	Outstanding claims provision	Provision for unexpired risk	Total
Gross amount				
1 January 2021	49.950	51.663	2.858	104.471

Salaries	495	59
Other	244	397
Total	5.508	5.374

9. Provisions

Items, EUR'000	Restructuring	Bonuses of employees	Total
Balance on 31 December 2020	328	-	328
New provisions	150	1.209	1.359
Reclassification	-	794	794
Provisions used during the year	(229)	(1.028)	(1.257)
Balance on 31 December 2021	249	975	1.224
New provisions	470	607	1.077
Provisions used during the year	(276)	(892)	(1.168)
Balance on 30 June 2022	443	690	1.133

Restructuring reserve

During 2022, the Company committed to a plan to restructure the Company's activities to improve the efficiency. Following the announcement of the plan, the Company recognised a provision of EUR 470 thousand for expected restructuring costs, including employees' termination benefits. Estimated costs were based on the terms of the relevant contracts. The provision of EUR 276 thousand was used during six months 2022. The restructuring is expected to be completed by December 2022.

During 2021, the Company committed to a plan to restructure the Company's activities to improve the efficiency. Following the announcement of the plan, the Company recognised a provision of EUR 150 thousand for expected restructuring costs, including employees' termination benefits. Estimated costs were based on the terms of the relevant contracts. The provision of EUR 229 thousand was used during the year. The restructuring is expected to be completed by December 2022.

Bonuses of employees

Accrued bonuses of employees have been reclassified from the accrued expenses and deferred income category to Provisions category on 01.01.2021.

Bonuses of employees are accrued according to the valid motivation system in the Company.

10. Results of non-life insurance activities

Country, where insurance agreement was concluded	Gross written premiums, EUR'000	
	2022	2021
Republic of Lithuania	35.066	33.082
